

MARTÍN ALEJANDRO CONTRERAS

IT Generalist & AI Automation · End-to-End IT Projects · Full-Stack & Systems

Buenos Aires, Argentina | martinAlejandroContreras@outlook.es | [linkedin.com/in/martinalejandrocontreras](https://www.linkedin.com/in/martinalejandrocontreras)

PROFESSIONAL SUMMARY

Hands-on IT Generalist with 6+ years of end-to-end technical experience: from component-level PC hardware repair (own shop, 50+ clients) to critical enterprise platforms under banking compliance (Linux RHEL 9, OpenShift, Active Directory, and production change control in SAP). Today, I design and direct AI-powered systems and software products (Claude Code, Gemini, MCP, offline-first architectures), enforcing strict rule-scaffolding, automated testing (500+ tests), and change control. Specialized in solving IT end-to-end for SMBs and fast-moving companies: infrastructure modernization, networking (Cisco VLANs, WiFi), layered backups (LTO-7 tape and cloud), AI-driven process automation, self-contained Windows installers, and turnkey deployments that eliminate technical debt. Languages: Spanish native; English: written fluent / spoken functional (daily use of technical documentation and international vendor support).

WORK EXPERIENCE

Gaucha Agro — AI-Assisted Systems Development

2026 – Present

Own Product · Buenos Aires · Poultry Farm Management Software & AI Scaffolding

End-to-End Product Development & Applied AI Automation

- **Product development with AI:** designed and directed the complete build of a poultry farm management system (FastAPI, React, PostgreSQL, and Windows installer). Code is written by AI under my direction daily using Claude Code and Gemini.
- **Rule scaffolding & testing:** hooks re-injecting current tasks into every message, custom skills, and versioned memory files. 500+ automated tests and hands-on review as the quality gate before every commit.
- **Offline-first architecture:** designed to run on the farm PC offline, syncing mobile phones over local WiFi. Self-contained Windows installer (Inno Setup) packaging embedded Python and portable PostgreSQL: double-click and it runs.

Platforms & Infrastructure Analyst

Apr 2025 – Mar 2026

GIRE S.A. · Buenos Aires · DUCIT–GIRE Group · Payments & Collections (Rapipago)

Critical Platforms Operations & System Deployment

- **OpenShift & banking APIs:** OpenShift operations with YAML —monitoring, users, access and group permissions—. Supported critical payment APIs for Rapipago, including incident response.
- **BO 4.3 deployment on RHEL 9:** installed backend and frontend across three dedicated environments on VMware, entirely from the console. Coordinated connectivity rules, AD integration, and TLS certificates.
- **Root-cause diagnosis & tape backup:** diagnosed APS node saturation in production and presented the definitive node separation fix to BI management. Physical server mounting and connection to HPE tape library (LTO-7) under banking compliance.

SAP Basis Analyst

May 2024 – Nov 2025

GIRE S.A. · SAP S/4HANA — MM & TM Modules · 200+ users · DEV/QAS/PRD

- **Production change control:** final change-control gate before the production billing environment: validation of integration, parent and derived roles (PFCG, SU01/SU10, SUIM, ST01) and transports (STMS).
- **Privileged access management:** access authority to production for international SAP support in English (access under maintenance windows with dual documentary record). Patching (SPAM/SNOTE) and HANA on-call (ST22, SM21).

IT Business Support Specialist

Feb 2022 – May 2024

GIRE S.A. · Buenos Aires

- **Active Directory & hardware:** user lifecycle, groups, permissions, unlocks, and enterprise GPOs. Service desk requests in Jira, advanced hardware diagnosis, and component-level board repair.

Infrastructure & MDM Analyst — On-site

Feb 2021 – Mar 2022

DUCIT · Buenos Aires · Armored Transport Operations · DUCIT–GIRE Group · ~150 staff

- **Sole on-site technician & manager's right hand:** hands-on resolution of the entire building's IT —offices, crews, and armored fleet—. Single point of technical contact for vendors, reporting directly to management.
- **Mobile MDM fleet (140 devices):** configuration of armored-unit Zebra terminals, tablets, and crew phones with kiosk-mode policies, certificates, and custom Android images. Redesigned the update cycle, removing on-site standby.
- **Active Directory & security:** participated in full Active Directory redesign after 8 years of technical debt: security policies (USB port blocking), web proxy, and migration of the entire user base.
- **Vendor integration (SAP) & tape recovery:** identified integration flaws in third-party hardware connected to SAP and co-designed 3D parts with the vendor. Managed tape backups and restores for internal audits.

Field IT & Systems Technician

Jun 2019 – Feb 2021

POWERSIS (Clients: bank branches and corporate accounts) · Black Dragon (own shop)

- **Ransomware incident response:** assessment, isolation, and recovery of ~300 endpoints at a corporate client. Server hardware migration and equipment installation across bank branches.
- **Own computer shop (Black Dragon):** 50+ clients: building and repairing PCs and laptops, component-level board diagnosis, power supplies, soldering, data recovery, and rescue boot environments.

TECHNICAL SKILLS

APPLIED AI & AUTOMATION

AI direction (Claude Code, Gemini, DeepSeek, ZCode), context engineering, hooks, custom skills, MCP tools (Notion, Gmail, Slack), versioned memory files, automated task pipelines, and prompt test scaffolding

SOFTWARE & TOOLS

Python, FastAPI, React, PostgreSQL, self-contained Windows installers (Inno Setup), 500+ automated tests, Git, GitHub CLI, Jira Service Management, Docker, hardware (component-level diagnostics, soldering)

INFRASTRUCTURE & SYSTEMS

RHEL/Linux and Windows Server administration, Red Hat OpenShift, Active Directory & domain migration, GPOs, ManageEngine MDM (140 Zebra/Android devices), Data Center ops (iLO/iDRAC), VMware, HPE LTO-7 tape backup

ENTERPRISE PLATFORMS

SAP S/4HANA Basis (STMS, PFCG, SU01, SUIM, ST01, SPAM/SNOTE, SM36/SM37, HANA on-call), SAP BusinessObjects 4.3 (console install on RHEL 9, CMC, Tomcat/Java, APS node architecture), APIs on IBM API Gateway

NETWORKING & CONNECTIVITY

Segmented network design with VLANs (802.1Q), ACLs, NAT, DHCP, Cisco hardware (1841 router, Catalyst 2960 switch), WiFi/AP, Pi-hole DNS, Cloudflare Tunnels, firewall rule design, F5 load balancing, TLS certificates

LANGUAGES & TRAINING

English: written fluent / spoken functional (daily technical use). Spanish: native. Information Technology Management coursework (UADE, 2022–2023). Google IT Support Professional Certificate. SAP TADM10 & TADM12 training

EDUCATION

Information Technology Management — B.S. program (coursework)

Universidad Argentina de la Empresa (UADE) · Buenos Aires

2022 – 2023

CERTIFICATIONS & TRAINING

- SAP TADM10 — Training (Buffa Sistemas, 2024)
- SAP TADM12 — Training (Buffa Sistemas, 2024)
- Google IT Support Professional Certificate · IT Infrastructure Systems & Services Administration
